StartXFORCE is a keygen software that has been verified to work for Microsoft Office 2007, 2010, 2013 and 2016. It allows you to create legitimate volume licenses without paying any money and without having to use a product key. Because it works with the registered version of Office itself, the software is compatible with all versions of Windows and is completely undetectable by anti-virus programs or protection tools. Key Features: - Fully compatible with Microsoft Office products from 2007 up to 2016. - Works on both 32bit and 64bit machines. - Runs silently in the background so it can be started on startup without hassle. - Installs the license on a local hard drive or USB stick. - It will not interfere with copies of Windows Vista, 7, 8, 8.1 or 10 that are also installed on the same machine. - Allow you to unlock 32bit Office 2013 or 64bit Office 2013 after 30 days trial period. - No need of Microsoft account to get Microsoft Office 2016 working.

StartXFORCE does not require an internet connection to activate your product, unlike some other keygens available for this purpose on the internet. All activations are done locally with your personal information kept completely private and out of reach from hackers or piracy groups who might use it for profit in any way they see fit. StartXFORCE is easy to use and straightforward, yet powerful. After activating your product, StartXFORCE will keep your identity completely private. StartXFORCE will not associate any of your actions with your personal information or web-browsing history. The software does not reveal any of the information that can link you to the software itself, whether it be it's name, website address or even the serial number of the program you are using. StartXFORCE is completely free and can be downloaded without any registration required. However, an advertisement video is required. This advertisement video only appears briefly within StartXFORCE after installation and can easily be skipped without any effect on the product itself. StartXFORCE works by generating a product key in the background without any user-input or interaction. The product key is then used to activate Office products that are installed on the computer. Once the product has been activated, it is registered to your computer just like Windows is when you clean install it off Microsoft's original discs. StartXFORCE does not contain any malware of any kind. It doesn't require you to be logged into an account or leave behind any personal information about yourself in order to create the license. The software does not collect any information whatsoever about you, your computer, or what programs are installed on it. StartXFORCE works by creating a product key for you that is unique to your computer. This means that you can install Office on your computer, then uninstall it and then install it again later on without running into problems with the license. You can use as many copies as you like without having to worry about Microsoft blocking your key because someone else was using it at the same time as you. The license is strictly tied to your computer and will work regardless of what other programs or Windows versions are on the machine.
